

**AMENDMENTS TO THE CLAIMS**

This listing replaces all prior versions and listings of claims in the application.

**Listing of Claims**

1. (Currently amended) A process for isolation of one or more bio-molecule(s) from a bio-molecule-containing fluid comprising the steps of:

- a) optionally adjusting the pH of the bio-molecule-containing fluid;
- b) bringing the bio-molecule-containing fluid to a temperature of at least 40°C;
- c) applying a volume of said bio-molecule-containing fluid having a temperature of at least 40°C to an expanded bed adsorption column comprising an adsorbent, said expanded bed column is operated with a linear flow rate of at least ~~1,500~~ 1,500 cm/hour during loading of the bio-molecule-containing fluid to the chromatographic column;
- d) optionally washing the column;
- e) eluting at least one bio-molecule from the adsorbent.

2. (Currently amended) The process according to claim 1, wherein the expanded bed column is a large-scale column comprising at least 10 liters (l) of sedimented adsorbent.

3. (Previously presented) The process according to claim 1, wherein the expanded bed column is a large-scale column comprising from about 50 to 100 l of sedimented adsorbent, preferably from about 100 to 1000 l of adsorbent, more preferably from about 200 to 900 l of adsorbent, most preferably from about 300 to 800 l of adsorbent.

4. (Previously presented) The process according to claim 1, wherein the expanded bed column has a diameter of at least 10 cm, preferably of at least 20 cm, more preferably in the range of from about 50 cm to 200 cm, such as 100 to 150 cm.

5. (Previously presented) The process according to claim 1, wherein the one or more bio-molecule(s) has a molecular weight of at least 1000 Daltons, preferably of at least 1500 Daltons, more preferably of at least 2000 Daltons.

6. (Currently amended) The process according to claim 1, wherein the one or more bio-molecule(s) is/are selected from the group consisting of peptides, proteins, lipids, lipoproteins, polysaccharides, DNA, RNA, plasmids, polynucleotides, viral particles, cell constituents, cells and combinations thereof.

7. (Original) The process according to claim 6, wherein said proteins is selected from the group consisting of lactoferrin,  $\beta$ -lactoglobulin,  $\alpha$ -lactalbumin, immunoglobulins and lactoperoxidase.

8. (Previously presented) The process according to claim 1, wherein the bio-molecule-containing fluid is selected from the group consisting of body fluids, fermentation fluids, waste water, process water, plant extracts, animal tissue extracts, animal blood plasma, animal serum, synthesis mixtures and fluids derived therefrom.

9. (Original) The process according to claim 8, wherein the body fluid is selected from the group consisting of milk, plasma, urine, egg white and fluids derived therefrom.

10. (Previously presented) The process according claim 1, wherein the adsorbent consists of adsorbent particles wherein 50% of the number of particles has a particle size of at most 200  $\mu\text{m}$ , preferably at most 175, 150, 120, 100 or 80  $\mu\text{m}$ .

11. (Previously presented) The process according to claim 1, wherein the adsorbent consists of adsorbent particles wherein 50% of the number of particles has a particle size of at most 200  $\mu\text{m}$ , such as at most 150  $\mu\text{m}$ , particularly at most 120  $\mu\text{m}$ , more particularly at most 100  $\mu\text{m}$ , even more particularly at most 90  $\mu\text{m}$ , even more particularly at most 80  $\mu\text{m}$ , even more particularly at most 70  $\mu\text{m}$ .

12. (Previously presented) The process according to claim 1, wherein the adsorbent particle has a density of at least 1.5 g/ml.

13. (Currently amended) The process according to claim 1, wherein the linear flow rate is from about ~~1,500~~ 1,500 to ~~12,000~~ 12,000 cm/hr, preferably from about ~~1,800~~ 1,800 to ~~10,000~~ 10,000 cm/hr, such as about 3000 cm/hr.

14: (Previously presented) The process according to claim 1, wherein the volume applied is from about 2-3500 l/min.

15: (Currently amended) The process according to claim 1, wherein the volume applied per litre of adsorbent in one hour is at least 50 l, preferably at least 100 l, more preferably at least 150 l/min.
